SUBJECT INDEX TO VOLUME 9

Additive correction strategy, multigrid method based on, 511
Axially dispersed two-phase flow systems, 349

Boundary element method, optimal thermal insulation by, 163

Channel flow with step change in inlet temperature, 619
Complex geometries, prediction of heat and fluid flow in, 125
Confined rectangular regimes, finite-element analysis of laminar natural convection in, 323
Control-volume-based finite-element convection-diffusion computation, skewed, positive influence coefficient upwinding procedure for, 1
Curved grids, upstream-weighted advection approximations for, 241

Diabatic cyclic regenerators, thermal performance of, 183
Discrete phase change, finite-element enthalpy method for, 403

Eigenvalue method for solving transient heat conduction problems, 247

Fluid flow, improved control volume finite-element method for, 253
Forced convection, conservative isoparametric spectral element method for, 277
Free-convection problems, comparative study of two numerical procedures for, 631
Freezing in a vertical tube, numerical predictions of, 79

Heat and mass transfer:
  improved control volume finite-element method for, 253
  in a uniform oncoming flow, 419
Heat transfer:
  analysis of during melting of pure metal from an isothemal vertical wall, 539
  laminar forced convective, 677
  parallel computations in, 639
Horizontal concentric annulus with heated rotating inner cylinder, mixed-convection flows in, 591

Jet, axisymmetric, turbulent, buoyant, 495

Natural convection:
  flow, vortex instability of, 697
  in an inclined enclosure, 217
  liquid-phase, transient freezing with, 59
  unsteady, generated by heated surface within an enclosure, 715
Nonhygroscopic regenerator matrices, condensation in, 365
Nonisothermal chemical transport in porous media, second-order upwind differencing method for, 453
Nonlinear inverse heat conduction problem, new finite-difference method for, 27
Non-Newtonian liquid, nonisothermal mass transport in a flat conduit for flow of, 473

One-sided heated rectangular duct, numerical and experimental turbulent heat transfer results for, 301
Open square cavities, combined buoyancy- and thermocapillary-driven convection in, 441

Packed bed, enhanced cooling near edge of, 97
Plate fin in porous medium, conjugate mixed convection heat transfer analysis of, 575

Radially symmetric heat conduction, unified model of, 43
Recirculating flow computation, study of using body-fitted coordinates, 559

Solid-phase conduction, two-dimensional transient freezing with, 59
Symmetrically or asymmetrically heated channel, laminar mixed convection in, 605

Three-dimensional convection-diffusion problems, 143
Transient conduction, from a finite cylinder with time-varying internal heat generation, 731
Transient diffusion problems, method for solving, 663
Transient environmental ice model, mixed implicit-explicit variable grid scheme for, 381
Transient heat conduction problems, eigenvalue method for, 247
Tube-wall conduction, two-dimensional transient freezing with, 59
Turbulent pulsed ducted flow, 201
Turbulent shear flows, 115
  heat transfer in, 335
Two-dimensional transient freezing, 59

Upstream-weighted advection approximations for curved grids, 241

Vertical tube, numerical predictions of freezing in, 79
